DETAILED ACTION

Response to Arguments

1. Applicant's arguments, see p.16, filed 01/09/09, with respect to the objection of claim(s) 2 and 4-38 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made in view of Ma et al. US 2002/0041635 A1 (Ma).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 2 and 4-38 are rejected under 35 U.S.C. 103(a) as being unpatentable over Ma et al. US 2002/0041635 A1 (Ma).

Regarding claim 4, Ma teaches a transceiver (note paragraph 0038) for a wireless communications system (wireless communication system employing antenna, see Fig.1) comprising a transmitter (transmitter in Fig.1) configured to generate a preamble (109 generating and inserting preamble). The further limitations are functional language. As noted in MPEP 2114, apparatus must be distinguished from the prior art in terms of structure rather than function. Therefore, the further limitation of the first sequence and the second sequence are not structurally distinguishable from the teaching of Ma. And although Ma does not

explicitly teach the further limitation of the first and second sequences, it would have been obvious to one skilled in the art at the time the invention was made to recognize that the system of Ma would also be capable of providing such sequences for the purpose of permitting multiple signals to be transferred from a transmitter to a receiver (note paragraph 0011).

Regarding claim 9, the claim is rejected as applied to claim 4 wherein the third and fourth sequences are also not structurally distinguishable from the teaching of Ma.

Regarding claim 34, the claim is rejected as applied to claim 4 wherein a sequence that can be transformed, is also not structurally distinguishable from the teaching of Ma.

Regarding claims 2, 5-8, 10-33, and 35-38 do not cure the deficiency as the limitations are not structurally distinguishable from the teaching of Ma.

34-38

2114 Apparatus and Article Claims - Functional Language [R-1]

For a discussion of case law which provides guidance in interpreting the functional portion of means-plus-function limitations see [MPEP § 2181 <2100_2181.htm>](#) - [§ 2186 <2100_2186.htm>](#).

APPARATUS CLAIMS MUST BE STRUCTUR-ALLY DISTINGUISHABLE FROM THE PRIOR ART

Cir. 1997) (The absence of a disclosure in a prior art reference relating to function did not defeat the Board's finding of anticipation of claimed apparatus because the limitations at issue were found to be inherent in the prior art reference); see also *In re Swinehart*, 439 F.2d 210, 212-13, 169 USPQ 226, 228-29 (CCPA 1971);< *In re Danly*, 263 F.2d 844, 847, 120 USPQ 528, 531 (CCPA 1959).
